

Website Project Proposal

Project Subject

Development of a website for a smoked products business, including smoked sausages, beef, chicken, ribs, and other artisanal smoked foods.

Project Description

The purpose of this project is to design and develop a professional website that serves as the online presence of the business. The website will allow customers to learn about the products, place orders online, and discover the story behind the brand. It will also provide business information, contact details, location information, and options for both wholesale and retail customers. Potential business clients, such as restaurants, stores, and distributors, will be able to request wholesale purchases, while individual customers will be able to buy products for personal consumption.

Project Reason and Purpose

This project is based on a real family business. My mother has been dreaming of starting this smoked products business for many years, and only recently decided to turn that dream into reality. As a software development student, I want to support her by creating a professional website that helps establish the brand and expand its reach. The goal of the website is to promote the business, attract new customers, increase visibility, and create opportunities for growth. In addition, the website will help communicate the values of the business, including family tradition, artisanal preparation methods, and the quality of the products. This project is meaningful to me because it combines my academic knowledge with the opportunity to contribute to my family's entrepreneurial journey.
